

John:

No one gets past this bad boy, unless you want them in.

Schedule a meeting to learn how Bouncer™ can safeguard your endpoints and get the remote control for your enclosed Bouncer robot!

Hey John:  
Meet Bouncer™: The next generation in security.  
And your new best friend.

Learn how Bouncer can secure your endpoints and get the remote control for your enclosed Bouncer robot!

## Bouncer: Intelligent endpoint security from CoreTrace. (Your life just got a whole lot easier.)

### Put the Bouncer Robot on your side!

He walks. He talks. He operates by infrared control. He blasts discs at your enemies, your co-workers, or any target you choose. All you have to do get his remote control is respond by entering your data code at the URL shown below!

### He's strong, yet sensitive.

Put Bouncer 4.0 from CoreTrace to work guarding your endpoints and malware, spyware and other digital riff raff don't stand a chance. Based on CoreTrace's patented Whitelisting technology, Bouncer 4.0, provides a turnkey security solution that shuts down threats.

Bouncer runs only the programs you want to run and keeps all others out—while still allowing users to make the trusted changes predefined by you. So you get the benefits of lockdown technology without the management headaches that come with most Whitelisting products. Plus, you'll see significant ROI in a short period of time, while watching operations costs plummet. And compliance issues will be a thing of the past.

### He out bounces the Blacklist.

Blacklisting or traditional signature-based technologies worked fine when there were a hundred well publicized threats to guard against. But today, there are millions of silent threats that rob you of valuable resources: money, data, and time. Blacklist products can't keep up.

Bouncer 4.0 works off a Whitelist of the programs you want to run—and that's a handful compared to what you want to keep out. Nothing gets through unless you want it to. As the system administrator, you define what changes you expect and who you expect to make the changes.

Then relax a bit. Users will be happier because they can make needed changes, and since Bouncer controls transparently, their systems perform better. You'll have far fewer emergency patches, and the IT Help Desk people can file their nails or catch up on their reading.

### He's a financial wiz.

Bouncer's a tough, scalable solution that keeps threats far away from your system, but it's also smart when it comes to ROI and lower total cost of ownership. Estimates show that Bouncer pays for itself in less than 21 months with a return on investment of 110%.

After factoring in the cost to purchase, maintain, and manage the Bouncer solution, a recent analysis showed an organization of 500 can save \$990,990 annually. Bouncer saves you money by:

- Eliminating the need for frequent security patches and anti-malware solutions;
- Blocking configuration drift and reducing the need for frequent license auditing;
- Eliminating Help Desk calls related to security failures, performance, and system instability issues;
- Eliminating time-consuming recovery efforts and lost productivity due to security breaches.

### Take control of endpoint security and your cool new Bouncer Robot!

Just visit the special Web page we've created for you and enter your unique ID Code. We'll soon be in touch to set up a meeting, and we'll bring you the remote control for your Bouncer Robot!
